DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being anticipated by Nakamura (5,216,693).

As per claim 1, see figure 12, and col. 10, lines 9-33, Nakamura discloses a method comprising:

step (52) of sequentially receiving a plurality of sample data from a received signal (RECEIVING SIGNAL); and

step (51) of shifting a storage position of a PN sequence (PN CODE SIGNAL) according to a storage position of the sample data being stored or held at an input of digital means (52) to be timely correlated with the PN sequence.

As per claim 2, Nakamura discloses that the sample data are stored according to their sequence without shifting their storage positions (see figure 12).

As per claim 3, see figure 12, and col. 10, lines 9-33, Nakamura discloses a method comprising:

step (52) of storing or holding each data sample in a data storage at an input of digital means (52) to be timely correlated;

step (51) of shifting an PN sequence in a shift register (51) for reference positions to a corresponding position of the sample data when the data sample is stored in means (52); and

step (52) of performing a matching operation to match all the stored sample data and the PN sequence that are positioned in the corresponding position.
